Born to Build Jim Clifton,Sangeeta Badal,2018-05-08

People will ask you throughout your life, “Where do you work?” and “What do you do?” They never ask you, “What are you building?” When conversations change to “What are you building?” the world will change. Written for anyone trying to figure out how to make the most of their lives, *Born to Build* seeks to inspire entrepreneurs and ambitious, self-motivated people to build something that will change the world. A builder’s venture could be a small business that grows into a mammoth enterprise, a thriving new division in an existing company, a nonprofit, a social enterprise, a church, a school — anything that creates economic growth and makes a lasting impact on society. *Born to Build* is written by Gallup Chairman and CEO Jim Clifton and Sangeeta Badal, Ph.D., Principal Scientist for Gallup’s Entrepreneurship and Job Creation initiative, and is grounded in years of research. This book goes beyond the conventional economics-based business training and instead offers a uniquely psychological approach to venture building. It gives readers the tools and techniques they need to

understand who they are, what motivates them and what they can build — and how. By following the practical steps in *Born to Build*, readers will have the tools to build a sustainable and profitable venture of any size from scratch. Central to the book is a code that allows readers to take Gallup’s Builder Profile 10 (BP10) assessment, which identifies their innate talents and motivations and shows them how to make the most of their talents to build a successful enterprise.

Fragile Sites Isabel Arrieta,Olga Penagarikano,Mercedes Téllez,2006-11-06 Fragile sites common features of human (and also of other mammalian) chromosomes. Chromosomal fragile sites are non-randomly distributed loci that are especially prone to forming gaps, breaks or tri-radial figures in metaphase chromosomes when cells are cultured under conditions that inhibit DNA replication or repair. This new and important book is divided into 3 parts: 1. An overview about fragile sites on chromosomes, their classification, cytogenetics, expression, replication timing, and clinical significance and heritance, 2. The characteristics of fragile loci which lead to the expression of fragility specifically at these sites and 3. the link between fragile sites and human pathological conditions.

History in Public Space Joanna Wojdon,Dorota Wiśniewska,2024-08-05 This book focuses on various manifestations of history in public spaces: in the physical ones of various historical times and geographical places, as well as in the virtual world. It discusses how the spaces have been shaped and re-shaped, by whom and for what (not always laudable) purposes, and raises pragmatism and ethical questions for both research and practical activities in

the field. By combining both micro and global perspectives, the universal role that history plays in spaces created by and for, as well as the factors determining its usages, is revealed. The authors are rooted in specific national contexts: Canadian or American, Ukrainian or Polish, British or Irish, German or Luxembourgish, Korean or Brazilian, and the case studies are varied including large cities and small towns, city centers, and godforsaken cemeteries, but the narratives built on these cases go beyond when they deal with issues such as decoding history and its meanings in public spaces, doing history in public spaces, and observing changes in manifestations of history in public spaces. This volume is an essential resource for anyone interested in the relationship between history and public space in a global perspective.

**Neurological, Psychiatric, and Developmental Disorders** Institute of Medicine, Board on Global Health, Committee on Nervous System Disorders in Developing Countries, 2001-01-01 Brain

disorders—neurological, psychiatric, and developmental—now affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

Negotiating Social Contexts Andra M. Basu, 2007 This book examines the identification choices of a group of biracial college women and explores how these identifications relate to their choices and constructions of

different social contexts. It is a qualitative study that draws on recent psychological literature, as well as personal interviews and focus groups with a group of biracial college women. The book includes 1) a review of the relevant literature concerning biracial individuals, 2) a discussion of some of the unique issues facing researchers who work with biracial populations, and 3) an indepth examination of the relationship between identity and different social contexts for a group of biracial women. The book addresses issues critical to educators, counselors, policy makers and researchers who work with biracial students, as well as biracial individuals and their families. For example, it shows how, for this group of biracial college women, identity choices did influence their choices and constructions of social contexts, particularly at the school that they all attended. Yet while identification choices did influence their perceptions about their social contexts, other factors such as social barriers also influenced them. Family members played a role in their identification choices as well, but siblings were found to be more influential than parents. In addition, the book demonstrates how educators and biracial mentors had a significant impact on this particular group of biracial women. The implications of these findings for parents, educators and future researchers are considered, as the number of biracial individuals living in the United States continues to grow.
