Born to Build Jim Clifton, Sangeeta Badal, 2018-05-08 People will ask you throughout your life, “Where do you work?” and “What do you do?” They never ask you, “What are you building?” When conversations change to “What are you building?” the world will change. Written for anyone trying to figure out how to make the most of their lives, *Born to Build* seeks to inspire entrepreneurs and ambitious, self-motivated people to build something that will change the world. A builder’s venture could be a small business that grows into a mammoth enterprise, a thriving new division in an existing company, a nonprofit, a social enterprise, a church, a school — anything that creates economic growth and makes a lasting impact on society. *Born to Build* is written by Gallup

Chairman and CEO Jim Clifton and Sangeeta Badal, Ph.D., Principal Scientist for Gallup’s Entrepreneurship and Job Creation initiative, and is grounded in years of research. This book goes beyond the conventional economics-based business training and instead offers a uniquely psychological approach to venture building. It gives readers the tools and techniques they need to understand who they are, what motivates them and what they can build — and how. By following the practical steps in *Born to Build*, readers will have the tools to build a sustainable and profitable venture of any size from scratch. Central to the book is a code that allows readers to take Gallup’s Builder Profile 10 (BP10) assessment, which identifies their innate talents and motivations and shows them how to make the most of their talents to build a successful enterprise.

Stroke Genetics Hugh S. Markus, 2003 Stroke is a major cause of death and the major cause of adult neurological disability in most of the world. Despite its importance on a population basis, research into the genetics of stroke has lagged behind that of many other disorders. However, the situation is now changing. An increasing number of single gene disorders causing stroke are being described, and there is growing evidence that polygenic factors are important in the risk of apparently sporadic stroke. *Stroke Genetics* provides an up-to-date review of the area, suitable for clinicians treating stroke patients, and both clinical and non-clinical researchers in the field of cerebrovascular disease. The full range of monogenic stroke disorders causing cerebrovascular disease, including ischaemic stroke, intracerebral

haemorrhage, aneurysms and arteriovenous malformations, are covered. For each, clinical features, diagnosis, and genetics are described. Increasing evidence suggest that genetic factors are also important for the much more common multifactorial stroke; this evidence is reviewed along with the results of genetic studies in this area. Optimal and novel strategies for investigating multifactorial stroke, including the use of intermediate phenotypes such as intima-media thickness and MRI detected small vessel disease are reviewed. The book concludes by describing a practical approach to investigating patients with stroke for underlying genetic disorders. Also included is a list of useful websites.

In Vitro Drug Release Testing of Special Dosage Forms Nikoletta Fotaki, Sandra Klein, 2019-12-31 Guides readers on the proper use of in vitro drug release methodologies in order to evaluate the performance of special dosage forms In the last decade, the application of drug release testing has widened to a variety of novel/special dosage forms. In order to predict the in

vivo behavior of such dosage forms, the design and development of the in vitro test methods need to take into account various aspects, including the dosage form design and the conditions at the site of application and the site of drug release. This unique book is the first to cover the field of in vitro release testing of special dosage forms in one volume. Featuring contributions from an international team of experts, it presents the state of the art of the use of in vitro drug release methodologies for assessing special dosage forms' performances and describes the different techniques required for each one. *In Vitro Drug Release Testing of Special Dosage Forms* covers the in vitro release testing of: lipid based oral formulations; chewable oral drug products; injectables; drug eluting stents; inhalation products; transdermal formulations; topical formulations; vaginal and rectal delivery systems and ophthalmics. The book concludes with a look at regulatory aspects. Covers both oral and non-oral dosage forms Describes current regulatory conditions for in vitro drug release testing Features

contributions from well respected global experts in dissolution testing *In Vitro Drug Release Testing of Special Dosage Forms* will find a place on the bookshelves of anyone working with special dosage forms, dissolution testing, drug formulation and delivery, pharmaceuticals, and regulatory affairs.

Advances in Bioremediation of Wastewater and Polluted Soil Naofumi Shiomi, 2015-09-09 The pollution of soil and groundwater by heavy metals and other chemicals is becoming a serious issue in many countries. However, the current bioremediation processes do not often achieve sufficient remediation, and more effective processes are desired. This book deals with advances in the bioremediation of polluted soil and groundwater. In the former chapters of this book, respected researchers in this field describe how the optimization of microorganisms, enzymes, absorbents, additives and injection procedures can help to realize excellent bioremediation. In the latter chapters, other researchers introduce bioremediation processes that have been performed in the field and novel bioremediation processes. Thus, the

readers will be able to obtain new ideas about effective bioremediation as well as important information about recent advances in bioremediation.

Poorly Soluble Drugs Gregory K. Webster, Robert G. Bell, J. Derek Jackson, 2017-01-06 This book is the first text to provide a comprehensive assessment of the application of fundamental principles of dissolution and drug release testing to poorly soluble compounds and formulations. Such drug products are, vis-à-vis their physical and chemical properties, inherently incompatible with aqueous dissolution. However, dissolution methods are required for product development and selection, as well as for the fulfillment of regulatory obligations with respect to biopharmaceutical assessment and product quality understanding. The percentage of poorly soluble drugs, defined in classes 2 and 4 of the Biopharmaceutics Classification System (BCS), has significantly increased in the modern pharmaceutical development pipeline. This book provides a thorough exposition of general method development strategies for such drugs,

including instrumentation and media selection, the use of compendial and non-compendial techniques in product development, and phase-appropriate approaches to dissolution development. Emerging topics in the field of dissolution are also discussed, including biorelevant and biphasic dissolution, the use on enzymes in dissolution testing, dissolution of suspensions, and drug release of non-oral products. Of particular interest to the industrial pharmaceutical professional, a brief overview of the formulation and solubilization techniques employed in the development of BCS class 2 and 4 drugs to overcome solubility challenges is provided and is complemented by a collection of chapters that survey the approaches and considerations in developing dissolution methodologies for enabling drug delivery technologies, including nanosuspensions, lipid-based formulations, and stabilized amorphous drug formulations.

Antitrust Law in Brazil Eduardo Molan Gaban, Juliana Oliveira Domingues, 2011-12-05 This book highlights the case of Brazil, a major

economic player among developing countries. In seventeen years of enforcing the Brazilian Antitrust Law, Brazil's Administrative Council for Economic Defence (CADE) has achieved outstanding results and has been recognized as the most effective antitrust enforcement agency in the developing world. This book is the first to describe and analyse the workings and case law of the CADE, emphasizing the agency's fundamental methodology and focusing on the contributory roles of such factors as the following: mechanisms and procedures of enforcement of the Antitrust Law in Brazil; methodologies (tests) used for antitrust assessment (for merger and conduct controls); evaluation of barriers to entry and rivalry in analysed markets; assessment of proof and circumstantial evidence within CADE case law and court decisions; examination of rational justifications for practices under investigation; legality of exchange of information; leniency agreements; cease and desist agreements; cultural issues and modifications; civil and criminal enforcement; private damages

considerations; and the role of international and regional competition law regimes (OECD, UNCTAD, WTO, ICN, Mercosur). The book's consolidated research on Brazil's cartel investigations clearly describes the main defence theories and the courts' decisions. The authors also explore the relationship of Brazil's antitrust law to the country's public policies in the areas of consumer rights, public procurement, and measures against corruption, with special emphasis on the synergies arising from antitrust law and consumer protection. It is worth noting that the studies carried out in this book discussed Law No. 8884/94 (Brazilian Antitrust Law) and the New Brazilian Antitrust Law, which was passed on 5 October 2011 and which will be enforced in 2012. With its unique synthesis of constitutional law, comparative antitrust law, and CADE's case law, this book will be welcomed by competition lawyers and other parties interested in methods and procedures used in merger and conduct control, and especially in anti-cartel enforcement, in developing countries.

Prospects of Organic Waste

Management and the Significance of Earthworms Katheem Kiyasudeen S, Mahamad Hakimi Ibrahim, Shlrene Quaik, Sultan Ahmed Ismail, 2015-12-14 The main aim of this book is to bridge the gap between aerobic and anaerobic waste treatments by concentrating on studies of earthworms. In particular, vermicomposting is being discussed as well as its properties and applications. Other subjects touch on the treatment of palm oil mill effluents, the various importance of earthworms, its scope and future aspects of earthworm research, and the impact of waste management practices on human health.

Stepmonster Wednesday Martin, 2011-01-21 An honest and groundbreaking guide to understanding the complicated emotions that develop between stepmothers and children. When faced with often overwhelming challenges, what woman with stepchildren is unfamiliar with that "stepmonster" feeling? Half of all women in the United States will live with or marry a man with children. To guide women new to this role—and empower those who are struggling with

it—Wednesday Martin draws upon her own experience as a stepmother. She's frank about the harrowing process of becoming a stepmother, she considers the myths and realities of being married to a man with children, and she counteracts the cultural notion that stepmothers are solely responsible for the problems that often develop. Along the way, she interviews other stepmothers and stepchildren and offers up fascinating insights from literature, anthropology, psychology, and evolutionary biology that explain the little-understood realities of this unique parent-child relationship and—in an unexpected twist—shows why the myth of the Wicked Stepmother is the single best tool for understanding who real stepmothers are and how they feel.

Legendary Locals of Edgecombe and Nash Counties Monika S.

Fleming, 2013 The rich agricultural land of northeastern North Carolina was originally settled in the mid-18th century and, in 1777, divided into two counties: Edgecombe and Nash. In 1818, the Battle family established a textile mill that remained in operation for more than 175 years and became the basis for the city of Rocky Mount. The Atlantic Coastline Railroad chose the area as its repair shop in 1899 and, at the turn of the 20th century, the area was booming. Diverse communities produced outstanding educators, groundbreaking physicians, and business leaders. Residents included Olympians, baseball hall of famer Buck Leonard, and basketball greats Phil Ford and Buck Williams. Creative citizens became award-winning musicians, painters, and writers, like novelist Kaye Gibbons and entertainer Kaye Kyser. Military service in conflicts from the Revolutionary War to the Iraq War included generals, admirals, and a

Medal of Honor recipient. Legendary Locals of Edgecombe and Nash Counties celebrates some of the individuals who have left their mark.

With My Dog Eyes Hilda Hilst, 2014-04-29 Hilda Hilst (1930-2004) was one of the greatest Brazilian writers of the twentieth century, but her books have languished untranslated, in part because of their formally radical nature. This translation of *With My Dog-Eyes* brings a crucial work from her oeuvre into English for the first time. *With My Dog-Eyes* is an account of an unraveling—of sanity, of language . . . After experiencing a vision of what he calls “a clear-cut unhelped-for,” college professor Amós Keres struggles to reconcile himself with his life as a father, a husband, and a member of the university with its “meetings, asskissers, pointless rivalries, gratuitous resentments, jealous talk, megalomaniacs.” A stunning book by a master of the avant-garde.

Avery Colt Is a Snake, a Thief, a Liar Ron A. Austin, 2019 Austin's semi-autobiographical, linked story collection follows the misadventures of Avery Colt as he struggles to survive in

North St. Louis alongside his family. Learning the best way to slaughter a goat, rebuilding his family's corner market, and reckoning the weight of a revolver are a few of the challenges Avery faces. As he matures through each page, Avery takes control of his circumstances and attempts dangerous feats of alchemy. By confronting his own fears and limitations, he seeks to transform cruelty into compassion, rind into fruit, despair into hope. Charged with urgency and emotion, Austin's prose faithfully renders a community determined to overcome crisis with strength, dark humor, and plenty of heart --

The Urban Revolution Henri Lefebvre, 2003 Originally published in 1970, *The Urban Revolution* marked Henri Lefebvre's first sustained critique of urban society, a work in which he pioneered the use of semiotic, structuralist, and poststructuralist methodologies in analyzing the development of the urban environment. Although it is widely considered a foundational book in contemporary thinking about the city, *The Urban Revolution* has never been translated into English—until now. This first English edition, deftly translated by Robert Bononno, makes available to a broad audience Lefebvre's sophisticated insights into the urban dimensions of modern life. Lefebvre begins with the premise that the total urbanization of society is an inevitable process that demands of its critics new interpretive and perceptual approaches that recognize the urban as a complex

field of inquiry. Dismissive of cold, modernist visions of the city, particularly those embodied by rationalist architects and urban planners like Le Corbusier, Lefebvre instead articulates the lived experiences of individual inhabitants of the city. In contrast to the ideology of urbanism and its reliance on commodification and bureaucratization—the capitalist logic of market and state—Lefebvre conceives of an urban utopia characterized by self-determination, individual creativity, and authentic social relationships. A brilliantly conceived and theoretically rigorous investigation into the realities and possibilities of urban space, *The Urban Revolution* remains an essential analysis of and guide to the nature of the city. Henri Lefebvre (d. 1991) was one of the most significant European thinkers of the twentieth century. His many books include *The Production of Space* (1991), *Everyday Life in the Modern World* (1994), *Introduction to Modernity* (1995), and *Writings on Cities* (1995). Robert Bononno is a full-time translator who lives in New York.

His recent translations include *The Singular Objects of Architecture* by Jean Baudrillard and Jean Nouvel (Minnesota, 2002) and *Cyberculture* by Pierre Lévy (Minnesota, 2001).
